2. Student1411876 - Hung Nguyen Duc
3. Student1411882 - Anh Le Huy
4. Student1411874 - Loc Nguyen Phuc

Can Tho, October 2023

PROBLEM DEFINITION OF PROJECT

The current operational status at Remedy Hospital involves manual recording of patient information and medical appointments, as well as some other activities. Operating in this manner poses several challenges, including the risk of errors due to manual data entry, difficulties in managing patient information, appointment scheduling, and limited scalability.

To address these issues, the hospital is planning to develop a desktop application for automated data management, appointment scheduling, and shift organization to improve efficiency and accuracy.

The current operational method at Remedy Hospital faces several limitations:

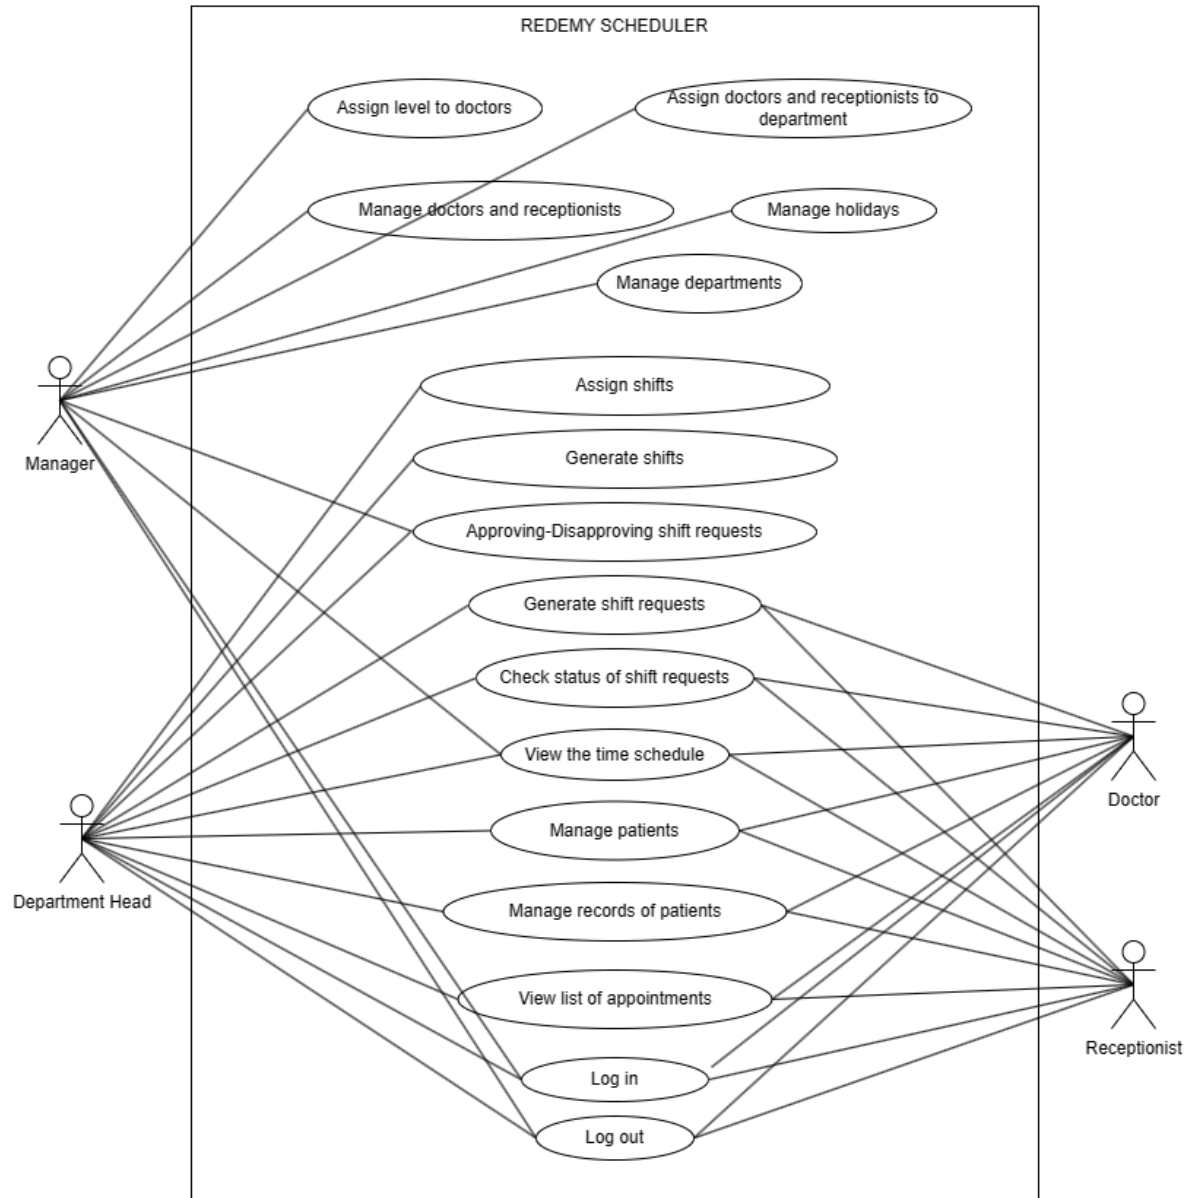

- **Processing and Access Time:** Manual recording in registers slows down the process of accessing information, causing delays and inefficiencies in data management
- **Potential for Errors:** Manual data entry increases the likelihood of errors in patient information, appointments, and doctor names, making it challenging to maintain accurate records
- **Poor Service Performance:** Reliance on manual records sometimes leads to multiple doctors caring for a single patient, affecting the quality of service and patient satisfaction
- **Appointment and Time Management Issues:** Manual scheduling introduces inaccuracies in appointment scheduling and time management, resulting in inefficient scheduling
- **Limited Scalability:** The manual system struggles to expand to meet the increasing demands for healthcare and patient management
- **Inconsistencies in Information:** Managing information across various sources leads to inconsistencies in patient details, appointments, and treatment outcomes

We will develop a system with different user roles: Manager, Department Head, Receptionist and Doctor and our application will have functions related to employee management, patient and medical record management, employee work schedule management, and some additional features.

CUSTOMER REQUIREMENTS SPECIFICATION (CRS)

Name of Project: Remedy Scheduler

1. Modeling requirements of customer (Use case Diagram)

Prepared By:

Duy Nguyen

Date:

2023/08/29

Approved By:

Duy Nguyen

Form No. 2A: Customer Requirements Specification (CRS)

2. Actor Description

No.	Actor	Use Case	Description
1	Manager	Assign level to doctors	This module allows Managers to assign the Doctor change to Department Head
		Assign doctors and receptionists to Department	This module allows Managers to assign the department into which the doctor or receptionist has to serve
		Manage doctors and receptionists	This module allows Managers to insert, update, delete and search for records of doctors and receptionist
		Manage holidays	This module allows Managers to add, alter, delete and view all holidays
		Manage departments	This module allows Managers to insert, update, delete and search for information of departments
		Approving-Disapproving shift requests	This module allows Managers to approve or reject the shift request generated by Department Heads
		View the time schedule	This module allows the Managers to view the time schedule of employees, i.e. shifts assigned by Department Heads
		Log in	This module allows Managers to log in to the application
		Log out	This module allows Managers to log out of the application
2	Department Heads	Generate shifts	This module allows Department Heads to generate shifts
		Assign shifts	This module allows Department Heads to assign shifts to suitable employees
		View the time schedule	This module allows Department Heads to view the time schedule of employees, i.e. shifts assigned by the manager

		Generate shift requests	This module allows Department Heads to generate a request for a shift exchange
		Check status of shift requests	This module allows Department Heads to check the status of the shift request e.g. approved, rejected or pending
		Approving-Disapproving shift requests	This module allows Department Heads to approve or reject the shift request as generated by the subordinates
		Manage patients	This module allows the Department Heads to insert, update, delete and search for information of patients
		Manage records of patients	This module allows the Department Heads to insert, update, delete and search for records of a patient
		View list of appointments	This module allows the Department Heads to view the list of appointments of employees
		Log in	This module allows Department Heads to log in to the application
		Log out	This module allows Department Heads to log out of the application
3	Doctor and Receptionist	View the time schedule	This module allows Doctors and Receptionist to view the time schedule of employees, i.e. shifts assigned by the manager
		Generate shift requests	This module allows Doctors and Receptionist to generate a request for a shift exchange
		Check status of shift requests	This module allows Doctors and Receptionist to check the status of the shift request e.g. approved, rejected or pending
		Manage patients	This module allows Doctors and Receptionist to insert, update, delete and search for information of patients

		Log out	This module allows Doctors and Receptionists to log out of the application

3. Use case Description

3.1. Assign level to doctors: This module allows Managers to assign the level of employees

- Purpose: This function allows the Manager to change employee's position from Doctor to Department Head
- Inputs: Doctor ID
- Outputs: Position of the Doctor change to Department Head

3.2. Assign doctors and receptionists to department: This module allows Managers to assign the department into which the doctor or receptionist has to serve his service

- Purpose: This function allows Managers to assign a doctor or receptionist to a specific department
- Inputs: Employee ID, department ID
- Outputs: Information about doctors and receptionists is added to the specific department

3.3. Manage holidays: This module allows Managers to add, alter, delete and view all the records of the holiday

- Add record:
 - Purpose: This function allows adding new record
 - Inputs: Holiday ID, holiday name, start date, end date, description
 - Outputs: New record added
- Alter record:
 - Purpose: This function allows alter record

Prepared By:

Date:

Approved By:

Duy Nguyen

2023/08/29

Duy Nguyen

- Inputs: Holiday ID, new information
- Outputs: Record updated
- Delete record:
 - Purpose: This function allows delete record
 - Inputs: Holiday ID
 - Outputs: Record Deleted
- View all record:
 - Purpose: This function allows viewing all records
 - Inputs: List of record
 - Outputs: Show all records

3.4. Log in: This module allows all to logging in

- Purpose: This function allows logging in
- Inputs: Username, password
- Outputs: Logging in to the application with permission

3.5. Log out: This module allows all to logging out

- Purpose: This function allows logging out
- Inputs: Confirm logging out
- Outputs: Log out of the application

3.6. Assign shifts: This module allows Department Heads to assign shifts to suitable employees

- Purpose: This function allows Department Heads to assign shifts to suitable employees
- Inputs: Employee ID, shift ID
- Outputs: Shift is assigned to the employee

3.7. Generate shifts: This module allows Department Heads to generate shifts

- Purpose: This function allows Department Heads to generate shifts
- Inputs: Department ID, room ID, date of the shift, type
- Outputs: New shift generated

3.8. View the time schedule: This module allows all to view the time schedule of employees

- Purpose: This function allows users to view one's work schedule
- Inputs: Employee ID
- Outputs: Show the time schedule

Prepared By:

Date:

Approved By:

Duy Nguyen

2023/08/29

Duy Nguyen

3.9. Generate shift requests: This module allows all except Managers to generate a request for a shift exchange

- Purpose: This function allows to generate the request for the shift
- Inputs: Current shift ID, desired shift ID
- Outputs: The request of the shift is created and waiting for confirmation

3.10. Check status of shift requests: This module allows all except Managers to check the status of the shift request e.g. approved, rejected or pending

- Purpose: This function allows checking if shift requests have been approved or not
- Inputs: Request ID
- Outputs: State of shift request e.g. Approved, Pending, Rejected.

3.11. Disapproving-Approving shift requests: This module allows the Managers or Department Heads to approve or reject shift requests generated by subordinates

- Purpose: This function allows Managers and Department Heads to approve or reject shift requests generated by subordinates
- Inputs: Request ID, approve or reject
- Outputs: Update status of the shift request

3.12. View list of appointments: This module allows all except Managers to view list of appointments of employees

- Purpose: This function allows to view list of appointments including information about patient, time, etc.
- Inputs: Employee ID
- Outputs: List of appointments

3.13. Manage doctors and receptionists: This module allows all except Managers to insert, update, delete and search for records of doctors and receptionists

- **Insert record:**
 - Purpose: This function allows adding new records
 - Inputs: Information about doctors and receptionists include name, department, gender, position, address, date of birth, phone, email, specialty, username and password auto generated for account

- Outputs: New record is added
- **Update record:**
 - Purpose: This function allows updating records
 - Inputs: Record ID, new information
 - Outputs: Record is updated
- **Delete record:**
 - Purpose: This function allows deleting records
 - Inputs: Record ID
 - Outputs: Record is deleted
- **Search record:**
 - Purpose: This function allows searching for records
 - Inputs: Record ID
 - Outputs: Show record

3.14. Manage departments: This module allows Managers to insert, update, delete and search for information of departments

- **Insert department:**
 - Purpose: This function allows adding new departments
 - Inputs: Department ID, department name
 - Outputs: New record is added
- **Update department:**
 - Purpose: This function allows updating departments
 - Inputs: Department ID, new information
 - Outputs: Record is updated
- **Delete record:**
 - Purpose: This function allows deleting departments
 - Inputs: Department ID
 - Outputs: Record is deleted
- **Search department:**
 - Purpose: This function allows searching for departments
 - Inputs: Department ID
 - Outputs: Show record

3.15. Manage patients: This module allows all except Managers to insert, update, delete and search for information of patients

- **Insert patient:**

- Purpose: This function allows adding new information about patient
- Inputs: Information about patients including ID, name, gender, phone, address, date of birth, note
- Outputs: New information about the patient is added
- **Update patient:**
 - Purpose: This function allows updating records
 - Inputs: Patient ID, new information
 - Outputs: Information about the patient is updated
- **Delete patient:**
 - Purpose: This function allows deleting records.
 - Inputs: Patient ID
 - Outputs: Information about the patient is deleted
- **Search patient:**
 - Purpose: This function allows searching records
 - Inputs: Patient ID
 - Outputs: Show information about the patient

3.16. Manage records of patients: This module allows all except Managers to insert, update, delete and search for records of patients

- **Insert record:**
 - Purpose: This function allows adding new records
 - Inputs: Information about the patient including patient ID and the problem
 - Outputs: Record id added
- **Update record:**
 - Purpose: This function allows updating records
 - Inputs: Patient ID, new information
 - Outputs: Record is updated
- **Delete record:**
 - Purpose: This function allows deleting records
 - Inputs: Patient ID
 - Outputs: Record is deleted
- **Search record:**
 - Purpose: This function allows searching for records
 - Inputs: Patient ID

■ Outputs: Show record

4. Hardware and Software required for implementing the project

	Server	Client
Hardware	<p>Processor speed: 1.4GHz or faster</p> <p>Processor type: AMD Opteron, AMD Athlon 64, Intel Xeon with Intel EM64T support, Intel Pentium IV with EM64T support</p> <p>RAM: 2GB</p> <p>Hard disk space: 20GB</p> <p>Graphics card: DirectX 9 with WDDM 1.0 driver or later</p> <p>Display: 800 x 600 or higher resolution</p>	<p>Processor speed: 1GHz or faster</p> <p>RAM: 2GB</p> <p>Hard disk space: 20GB</p> <p>Graphics card: DirectX 9 with WDDM 1.0 driver or later</p> <p>Display: 800 x 600 or higher resolution</p>

CUSTOMER ACCEPTANCE CRITERIA

No.	Customer's Acceptance Criteria
1	The application is executable and can be installed on computer running Windows OS
2	The application has different UI for different users to interact with it and use its features
3	The system has several roles that can interact with the database and have different levels of administration e.g. manager, department head, doctor,...
4	The application only allows users who have appropriate role to use its features
5	The application have features to manage the schedule by adding, deleting, updating,...
6	The application has the feature to assign the level of doctor for managers
7	The application has the feature to assign a doctor to a department for managers
8	The application has the feature to manage doctors and receptionists for managers
9	The application has the for managers to manage holidays
10	The application has the feature to manage departments for managers
11	The application has the feature to assign shifts to doctors for department heads
12	The application has the feature to generate shifts for department heads
13	The application has the feature to approve or reject shift change requests for department heads and managers
14	The application has the feature to generate shift change requests for department heads, doctors and receptionist
15	The application has the feature to check status of shift change requests for department heads, doctors, and receptionists
16	The application has the feature for users to view the time schedule
17	The application has the feature to manage patients for department heads, doctors and receptionists
18	The application has the feature to manage patients' health records for department heads, doctors and receptionists
19	The application has the feature for department heads, doctors and receptionists to view the list of appointments
20	The application has the feature for users to log in and log out

PROJECT PLAN

I. Project Details

1. Name of the Client: Remedy Hospital

2. Date of the Project Plan: 2023/08/24 to 2023/09/29

3. Project Vision/Objectives (Define the project vision/objectives as stated by the client):

- Project Vision:
 - The project aims to improve Remedy Hospital's operations with systematic patient information management, appointment scheduling, and doctor assignment with the help of computers to enhance efficiency and accuracy in patient service. Simultaneously, the project aims to reduce errors in information management and enhance the patient experience
- Specific Project Objectives:
 - Employee Assignment: The project will support doctor assignment based on qualifications and experience within the hospital. This facilitates easier doctor management
 - Employee Information Management: The system will assist in managing doctor information, including personal details, department, and specialty
 - Enhanced Service Quality: By systematically managing patient information, medical records, and assigning doctors, the project aims to improve service quality and minimize errors related to patient information management
 - The project will achieve these objectives by developing a desktop application for patient information management and doctor shift scheduling

4. Scope (Mention the scope of the project giving the location that will be covered, processed, range of services, and so on):

- The project includes functions for patient management, doctor management, work shifts management, and appointment scheduling:
 - Patient management function allows the creation, updating, and deletion of patient records, as well as searching for patient information and managing patient medical records

Prepared By:

Date:

Approved By:

Loc Nguyen Phuc

2023/08/29

Duy Nguyen

- Employees management function involves creating doctor profiles, categorizing them based on qualifications and specialties, and assigning them to appropriate departments
- Work shifts management function enables the creation and checking of doctor availability in work shifts
- Appointment scheduling and calendar management function includes managing work shifts, handling shift change requests, viewing appointment schedules, tracking vacation schedules, and managing work schedules

5. Our understanding of the client organization (Give the range of services, functions, overview of processes, and so on):

- Manager: Manage department, manage employees, manage shifts, manage holidays, view time schedule
- Department Head: Manage patient and health record, manage shift, view appointment, view time schedule
- Doctor: Manage patient and health record, view appointment, view time schedule, Create shift change request and check status of change request
- Receptionist: Manage patient and health record, view appointment, view time schedule, Create shift change request and check status of change request

6. Project Organization with Responsibilities and Authorities (Give the name of Project team members their roles and responsibilities):

No.	Member	Roles	Responsibilities
1	Duy Nguyen	Leader	Requirements, Design, Development, Testing, Deployment
2	Hung Nguyen Duc	Member	Requirements, Design, Development, Testing, Deployment
3	Anh Le Huy	Member	Requirements, Design, Development, Testing, Deployment

4	Loc Nguyen Phuc	Member	Requirements, Design, Development, Testing, Deployment
---	-----------------	--------	--

II. Project Initiation/Requirement Documents (Information required from the client as inputs regarding his/her system; could be the information about the services, processes, and so on)

While researching the requirements of Remedy Hospital, we also examined the VIETTEL-HIS application to understand the functionalities required for a hospital management system. Additionally, we listened to the client's requirements to make the application more comprehensive and tailored to their specific needs.

III. Deliverable (The documents to be handed over to the client - such as CRS, Design Document, Installation Manual, User Manual, Maintenance Manual, and Code of documents)

After completing the project, the following will be handed over to the client: User Manual, Installation Guide, Source Code, Documentation.

IV. Project Dependencies (Any event or task outside the scope of the project which will affect the success of the project)

The events encountered during project execution: unexpected computer errors, code consolidation without synchronization leading to non-functionality, varying progress among team members resulting in timeline discrepancies.

V. Major Project Milestones (Generating CRS, Building a Prototype, Gantt - describe the main milestones of the project)

VI. Quality Plan**1. Review Activities (Review meeting participants, frequency, and so on)**

The project team will meet once a week to consolidate code and provide unified solutions for encountered issues.

2. Testing Activities (Final Test)

Unit Test.

3. Backup and Recovery Strategies (In case of disk crash, network failures, and so on)

Each member stores their code individually, and the team uses a shared GitHub for this project to update their code after each addition, modification, or deletion. GitHub supports data backup, so when needed, we can recover it.

SELECT CURRENT SHIFT

The mockup shows a vertical container with two selectable shift options. The first option is a dark blue bar with a sun icon and the text '2023-10-02'. The second option is a medium blue bar with a moon icon and the text '2023-10-11'. Below these options is a large, empty white rectangular area.

SELECT DESIRED SHIFT

The mockup shows a vertical container with two selectable shift options. The first option is a medium blue bar with a moon icon and the text '2023-10-02'. The second option is a dark blue bar with a moon icon and the text '2023-10-06'. Below these options is a large, empty white rectangular area.

REASON

7/500

A large, empty white rectangular text input field with a thin grey border. The word 'example' is faintly visible in the top left corner of the field.

CODING STANDARDS DOCUMENT

I. Programming Standards

One of the fundamental aspects of maintaining a consistent and readable codebase is adhering to well-defined naming conventions. Properly chosen names for variables, functions, and classes can significantly enhance code clarity and promote effective collaboration among developers. In this project, we follow the below naming conventions:

1. Classes:

- Use PascalCase for class names
- Begin class names with an uppercase letter (e.g., CustomerOrder, FileManager)
- Opt for meaningful and intuitive class names that accurately represent the entity or concept they model.

2. Modules and Packages:

- Use lowercase letters for module and package names
- Separate words with underscores (e.g., utils, data_processing)
- Aim for concise yet meaningful names that reflect the module's purpose.

3. Avoid Abbreviations and Acronyms:

- While brevity is important, avoid excessive use of abbreviations or acronyms
- Prioritize clarity over brevity to ensure future developers can understand the codebase without ambiguity

4. Comments and Documentation:

- Complement the chosen names with clear and concise comments to explain complex logic or intentions behind certain code sections

II. Standards for code writing style

- Use consistent indentation with either 4 spaces or tabs
- Keep each line of code within 80-100 characters
- Utilize comments to explain important, complex, or design-related parts of the code
- Maintain one statement per line
- Place opening braces at the end of the declaration line, not on a new line

III. Standards for declaring Variables

- Use camelCase for variable names

Prepared By:

Date:

Approved By:

Duy Nguyen

2023/09/06

Duy Nguyen

- Begin variable names with a lowercase letter (e.g., itemCount, calculateTotal)
- Choose descriptive names that convey the purpose or content of the variable
- Avoid using single-letter variable names unless they represent loop counters
- For constants, use uppercase letters with underscores (e.g., MAX_ITEMS, DEFAULT_TIMEOUT)

IV. Standards for Function Declarations

- Use camelCase for functions names
- Begin variable names with a lowercase letter (e.g., run, getName())
- Choose descriptive names that convey the purpose or content of the function
- Specify data types for each parameter

V. Other Standards

FINAL CHECK LIST

No.	Aspect tested	Suggestion/Remarks
1	Have all the modules been property integrated and are they completely functional?	Yes
2	Are all the validations happening as specified in Process Design?	Yes
3	Have all Design and Coding standards been followed and implemented?	Yes
4	Have all the GUI forms performed the functions smoothly and exactly to the purpose of the initiation?	Yes
5	Have all the GUIs forms contained enough functional processes to run from the beginning to the end on a run?	Yes
6	Are all the GUIs easy-looking to use, the instruction detail is good enough for the user to follow?	Yes
7	Are there any bonus functional processes added to help users get to use the program easier?	No
